

## **Management Trainee JD**

### **Responsibilities:**

Graduate Engineers in the Operations departments will manage and supervise a team of skilled supervisors/workers on board vessels, ensuring that their tasks are completed on schedule, according to job and safety requirements. We welcome graduates who are looking for a fast-paced, non-deskbound job where they can put their problem-solving skills to use.

The successful applicants will be enrolled into our 2-year Graduate Engineer Programme, and they will be bonded to the company for the duration of the Programme.

They will undergo:

- i. On-the-job experience: given stretch assignments, projects work, job attachment to different trades, etc.
- ii. Developmental relationship: get support and feedback from managers, peers and mentors from day-to-day interactions.
- iii. Formal development: A small amount of what you learn is gained through formal development such as e-learning, modular classroom-style training, etc.

### **Requirements:**

We are looking for candidates that:

- Possess strong leadership, analytical and communication skills.
- Have high energy and are results-oriented.
- Able to work effectively with people of all levels.
- Conscientious and meticulous
